

CAST IRON *facts*

All quality cast iron products from Agnews are true to their original period or modern design and are available in Classic Black or with Agnews exclusive DURACOTE™ polished finish.

DURACOTE™ high lustre, polished finish is a protective process applied during manufacture to the surface of the cast iron and supresses tarnishing and corrosion.

Any signs of rust on black cast iron can be removed with fine steel wool (00) and then re-sprayed with fire resistant black paint. The product 'Autosol' should be used on polished surfaces. Brass plating should be cleaned only with a soft dry cloth.
